

# Edge Protection Supports

On a recent 4 Storey Office Block additional steel cantilever supports were added to the underside of the eaves to offer safe connection for edge protection.

## Key Points:-

1. SHS tubes, with scaffold locking bolt, welded to the ends to offer quick and easy fixing for scaffold tubes.
2. Small base plates welded to SHS tubes with drain holes.
3. Easy Removal from walkway below or via MEWP.
4. Mid span supports provided using hot rolled PFC's for support.
5. Extra steel but bigger savings on Scaffold costs.
6. Scaffold much reduced so less site time.
7. Stubs can be used again on future projects so even bigger savings.
