

INSULATION 'MUFFS'

Use of purpose-made-to-measure insulation 'muffs' in place of traditional metal boxes filled with rockwool insulation.

Traditionally, metal boxes are measured and fabricated to fit mechanical fitting. These boxes are effective initially, but following maintenance become damaged and ineffective.

By fitting factory-made-to-measure silicone coated glass cloth 'muffs' filled with any specification of insulation, a more effective and efficient system can be achieved, far superior to the commonly seen hand made versions.

The 'muffs' are waterproof and have a strong Velcro fastening with drawstring closures to ensure an exact fit on-site.

Traditional boxes

'Muffs'

1. Easier and quicker to fit so less working at height.
2. Minimises dust involved at workplace
3. Waterproof /wipe clean
4. Easier to remove and re-instate for maintenance purposes and to operate valves etc...
5. Does not get damaged during removal .
6. Purchase cost is approximately 10% cheaper than boxes.
7. Fitting costs are approximately 25% cheaper.
8. No working with sharp metal edges.
