

Site Temporary Electrical Services Energy/Maintenance Savings

With a view to reducing the amount of energy required to service a typical site temporary electrical installation, electronic timing devices were added to area lighting circuits.

Bullet Points

- **Simple and cost effective installation**
- **Very quick pay back in terms of labour and material savings**
- **Saves energy and hence fuel bill reduction**
- **Reduces light pollution**
- **Reduces the amount of lamp changes and therefore material and labour costs**
