

Support For Heavy Equipment

Here an upturned wastepaper bin has been used to support a piece of mechanical equipment. The reasons why this may not be the best idea, follow.

The “Not Recommended Method”

- An upturned waste paper bin may not be adequate to support the weight of the mechanical unit.
- It is uncommon for the load bearing properties of a waste paper bin to have been designed or calculated.

The “Recommended method”

- An adequately designed support system is the only option.
