

BUMP CAPS

Designed as a lightweight safeguard against accidental bumping or scraping of the head, bump caps are the perfect head protection choice for work areas where hard hats are not required but head injuries from low ceilings or protruding objects could occur.

- They are ideal for the type of commissioning and survey work carried out on many sites.
- Bump Caps incorporate a specially designed ABS hard shell & high density EVA inner foam liner that combines bump protection with high levels of ventilation and a towelling sweat band for wearer comfort.
- They are less bulky and more stable on the head when having to survey in ceiling voids and in tight spaces.
- Extremely light in weight - less stress on your head, neck, and back

* **Please note** - Bump caps do not provide any impact protection from falling objects. Bump caps are used as the name implies, for bump obstructions only. Low obstructions in a path of travel are bump obstructions. Hard hats are used when it is determined through a hazard assessment that overhead objects may fall and strike someone.
