

The quickest way to get to the top; but not the safest!

Whilst away on holiday abroad in the apartment complex, I couldn't believe what I was seeing and just had to take a picture. In the desperation to erect a stage and overhead canopy as quickly as possible the work force would do anything to take a short cut!

- To reach the top of the structure the men had to balance on the pallets at ground level then be raised to high level; how they didn't fall was a testament to their balancing skills.
- Once up in the air, they then had to manoeuvre from one piece of steel to another; whilst balancing themselves on the centre piece of steel, with no harnesses on!
- Their supervisor is stood at ground level directing and giving them instructions; he's not daft!
- The area wasn't cordoned off and what can't be seen in the shot are kids playing to the right of the fork lift truck!
- Luckily nobody was injured!
