

BetaGuard® Mobile Tower

Main Advantages (over traditional mobile tower scaffolds)

- Simpler to erect as there are no horizontal and diagonal braces
- Main components are significantly reduced which means less chance of loss on site
- Very quick to erect – 2 men took less than 5 minutes to erect a two tier platform
- Safer to erect (and dismantle) as advance guardrails are in place before the platform.
- Ergonomically better to erect as stretching to put components in place from a safe position is not required with this system.

Disadvantages

- Initial cost outlay (glut of traditional towers in circulation)

A video showing the ease of erection of the scaffold is available on Turner Access' web site via the following link: <http://www.turner-access.co.uk/products/collective-protection/betaguard%C2%AE-integral-advance-guardrail.aspx>
